

Foil roll lifter for vertical lifting of rolls up to 350 kg.

Warranty
10 år

Video
demonstration

The foil roll lifter is fully automatic and secures the roll in its internal core.

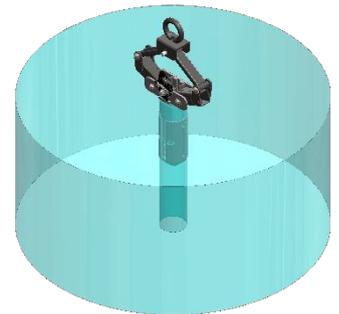

Fully automatic means that when the lifting beam is lowered into the roll's internal core, the mandrel is released and the roll's own weight ensures retention.

When the roll is lowered onto a surface, the mandrel is loosened while the latch engages, and the mandrel is released from the core.

Simple and efficient construction ensuring correct work ergonomics.

The foil roll lifter is mounted on an electric chain hoist and has a very low self-weight of only 6 kg.

There is a 10-year warranty on the foil roll lifter; however, wear parts are not covered by the warranty.

Options

- The foil roll lifter is standard for a core diameter of Ø70 mm., but can be expanded using jaws to Ø76 mm - Ø100 mm - Ø120 mm - Ø150 mm - Ø152 mm.

Technical Specifications

Item No.	Product type	Core diameter (mm)	Weight (kg)
1480	Foil lifter	70	6
1481	Jaws	76	0,72
1482	Jaws	100	0,72
1483	Jaws	120	0,72
1484	Jaws	150	0,72
1485	Jaws	152	0,72
